Valuation Summary

Valuation Score

29 / 100

Expensive Valuation

| Bad	Medium	Good

29

0   30   50   100

- Hindustan Unilever Ltd. has a valuation score of **29**, which indicates an Expensive Valuation.
- A High Valuation Score **(greater than 50)** indicates the stock is competitively priced at current P/E, P/BV and share price.
- The Valuation helps you identify stocks which are still bargains, and whose strengths are not fully priced into the share price.
Valuation Trend

Procter & Gamble Hygiene & Healthcare	25.5
Gillette India	29.2

Hindustan Unilever Ltd. (**29**) has fifth-highest Valuation score amongst its peers, behind Gillette India Ltd. (**29**)

P/E Buy Sell Zone

Strong Buy Zone **3.1%** into P/E buy sell zone

Strong upside potential   % time spent below current P/E   Gains already realized

- Hindustan Unilever Ltd. has spent 3.1% of the time below the current P/E 50.9. This puts it in the PE Strong Buy Zone
- This is based on the tendency of the P/E value to revert to its historical mean.
- If the P/E value has spent most of its time below the current value, then it means that most gains have probably been realised already, and it is time to sell.
- If the P/E value has spent very little time below the current value, then it means that there is strong potential upside, and it is time to buy.

Detailed stock report terminology

Trendlyne's stock report is a comprehensive company analysis report based on its durability, valuation and momentum scores along with the forecaster data, to give you a detailed analysis. The report also includes Trendlyne's checklist summary, technical analysis, peer comparison, mutual fund holdings details, insider trading and more.

Durability Score

- Durability scores are calculated from 0-100, with zero the worst and 100 the best. Durability scores above 55 are considered good(G) and below 35 are considered bad(B). Scores between 35-55 are considered neutral/Medium/Middle(M).
  Stocks with a high durability score (top 20 percentile) are companies that have consistently and over time, demonstrated good growth and cash flow, stable revenues and profits, and low debt.
  The durability score considers several different metrics and ratios around earnings and models these over time. Our stocks with high durability scores outperform the index significantly

Valuation Score

- Valuation scores are calculated from 0-100, with zero the worst and 100 the best. Valuation scores above 50 are considered good(G) and below 30 are considered bad(B). Scores between 30-50 are considered neutral/Medium/Middle(M)
  Stocks with a high valuation score (top 20 percentile) are companies whose business and financial advantages have not yet been priced into their share price. These companies typically have strong earnings but are currently flying under the radar, and Trendlyne's valuation score helps shine a spotlight on these companies.
  Firms with a low valuation score (bottom 20 percentile) are expensive stocks that have good broker coverage and already have their strengths priced in. They are popular but pricey. If you are buying them now it would be for a steep price tag: valuation scores help you identify that.

Momentum Score

- Scores are calculated from 0-100, with zero being the worst and 100 the best. Momentum scores above 59 are considered good(G) and below 30 are considered bad(B). Scores between 30-59 are considered neutral/Medium/Middle(M)
  Momentum score or momentum score identifies the bullish/bearish nature of the stock. Stocks with a high momentum score (which is calculated daily from over 30 technical indicators) are seeing their share price rise, and increase in volumes and sentiment.
  A low and falling momentum score indicates a falling share price. The pace at which this is changing is also important for the momentum score.

Analyst recommendation

- Analyst recommendation of a stock is an assessment made by financial analysts or brokerage firms about the investment potential of a particular stock. It is usually based on a thorough analysis of the company's financial performance, market trends, industry outlook, and other factors that may impact the stock's value.
  The analyst recommendation of a stock typically takes the form of a rating or a recommendation, such as "buy," "hold," or "sell." The recommendation is usually accompanied by a price target, which is the analyst's estimate of the stock's fair value.
  A low and falling momentum score indicates a falling share price. The pace at which this is changing is also important for the momentum score.

Trendlyne Checklist Score

- Trendlyne Checklist evaluates a stock based on its financial performance, ownership, peer comparison, value and momentum. This helps give an overall performance of the company based on the score.

PE buy/sell zone

- The PE buy/sell zone is calculated based on how many days a stock has traded at its current PE level. The current PE is compared to the stock's historical PE performance, to find out how often (for how many days in the past) the stock has traded at its current PE value.
  If the stock has usually traded above its current PE level (it's at a higher PE for the majority of trading days), then the stock is cheaper than usual and in the PE buy zone.
  If the stock has usually traded below its current PE level (it's at a lower PE for the majority of trading days), then the stock is more expensive than usual and in the PE sell zone.

Price Volume Charts

- Price volume charts are a type of financial chart that combines two key pieces of information about a stock: its price and trading volume. They are commonly used in technical analysis to identify trends and patterns in the market.
  In a price volume chart, the price of the security is plotted on the vertical axis, while the trading volume is shown on the horizontal axis. Each data point on the chart represents a single trading day, and the size of the data point may be proportional to the trading volume.

Peer Comparison

- Peer comparison in financial analysis is a method of comparing the financial performance and position of one company to its competitors or peers in the same industry or sector. The purpose of this comparison is to gain insights into how the company is performing relative to its competitors and to identify areas where it may be underperforming or overperforming. In Trendlyne's stock report, DVM scores are also included in the peer comparison section.

Technical Analysis

- Technical analysis is a method of analyzing stocks and other financial instruments that relies on charts and statistical indicators to identify trends and patterns in price and trading volume.
  Key momentum metrics included - relative strength index (RSI), Stochastic RSI, Ultimate Oscillator, moving average convergence divergence (MACD), average true range (ATR), money flow index (MFI), William, CCI 20 and Awesome Oscillator. Simple and exponential moving averages are also included.
  To analyse the volatility of the stock, Beta over different periods of time, Average Directional Movement Index and Bollinger bonds are used. Along with this, active candlesticks, daily volume analysis is also provided in the rapport.
